Space heaters can cause fires. Keep warm without worry. Follow these simple safety steps.

1

Keep children away from space heaters and other hot appliances.

2

Never store or use flammable liquids in the same room as a space heater.

3

Curtains, clothing, towels and other items that burn easily should be kept away from space heaters. Never use heaters to dry your clothes.

4

Unvented space heaters should not be installed for use in bedrooms or bathrooms unless they are specifically approved for that type of installation.

5

Have your gas appliances inspected annually to make sure they are heating properly and have a sufficient supply of air for complete combustion. Improperly maintained gas appliances can produce carbon monoxide.

If you suspect a problem with your gas appliance, contact your gas appliance repair company or Atmos Energy.
