

BE CAREFUL WITH
CAUTION!
SPACE HEATERS

atmosenergy.com

SPACE HEATERS CAN CAUSE FIRES. KEEP WARM WITHOUT WORRY. FOLLOW THESE SIMPLE SAFETY STEPS.

1

Keep children away from space heaters and other hot appliances.

2

Never store or use flammable liquids in the same room as a space heater.

3

Curtains, clothing, towels and other items that burn easily should be kept away from space heaters. Never use heaters to dry your clothes.

4

Unvented space heaters should not be installed for use in bedrooms or bathrooms unless they are specifically approved for that type of installation.

5

Have your gas appliances inspected annually to make sure they are heating properly and have a sufficient supply of air for complete combustion. An improperly maintained gas appliance could produce carbon monoxide. Carbon monoxide is a

toxic gas that can kill. Symptoms of carbon monoxide poisoning include headache, dizziness and nausea. If you suspect a problem with your gas appliance, contact your gas appliance repair company or Atmos Energy.
