SAFE
PROTECT YOUR FAMILY
FROM CARBON MONOXIDE

JUST BECAUSE YOU DON'T SMELL IT DOESN'T MEAN IT ISN'T THERE.

Carbon monoxide gas can do a lot more than make you sick. In a sufficient amount, carbon monoxide gas can kill.

Carbon monoxide is a poisonous, colorless and odorless gas that can be formed when fuels such as charcoal, gasoline, kerosene, natural gas, oil, propane

or wood are burned without a sufficient supply of air for complete combustion.

Symptoms of carbon monoxide exposure may include headache, dizziness and nausea. If you notice any of these symptoms, get plenty of fresh air immediately and seek medical attention.

BE SAFE. FOLLOW THESE SIMPLE PRECAUTIONS.

1

Have your gas appliances inspected annually to ensure that they are venting and operating properly.

2

Install carbon monoxide detectors that are Underwriters Laboratories listed carrying the UL mark.

3

If you suspect carbon monoxide problems with your appliances, call your local gas appliance repair company or Atmos Energy.
