

# NATURAL GAS: FUELING GOOD-PAYING JOBS.

Natural gas is the cornerstone to our economy. It's building prosperous careers, bringing opportunities all over America and making everyday life better. But there are extreme activists who want to stop natural gas and the promise it brings. Join us to keep America's energy flowing.

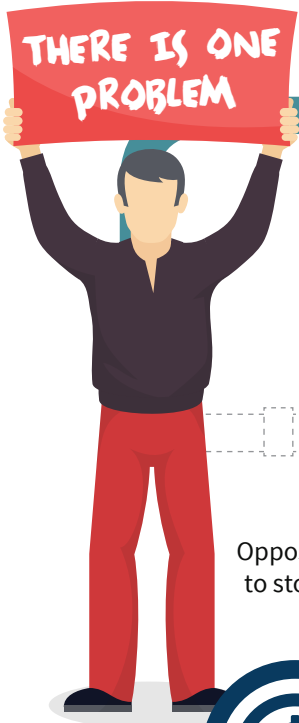

The U.S. is the number one producer of natural gas worldwide.

This surge in natural gas production has created good-paying jobs for millions of Americans.

How many jobs? 1.9 million in 2015 alone.

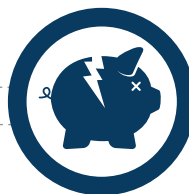

If we keep this up, we could see 3.5 million natural gas jobs by 2035.

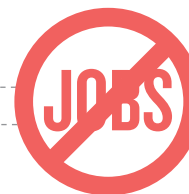

There's more good news for American families like yours.

Opposition groups are trying hard to stop natural gas development and transportation.

If they are successful, energy costs will rise, threatening jobs and our way of life.

This could mean 14.8 million jobs would no longer exist by 2022.

Overseas companies who have brought jobs to America could stop investing in us.

U.S. manufacturers who are now competitive worldwide could suffer serious blows.

The increase in the average cost of living for families like yours could approach \$4,000 by 2022.
